

The single use coffee pods (ex. Nespresso®, Tassimo®, and Keurig®) that you enjoy while at work can be collected and disposed of in a more environmentally sustainable way?

Collection points can be found in the staff break rooms on levels 1 and 3.

Level 3 Staff Breakroom

Level 1 Staff Breakroom (RT Library)

Please ensure to sort your coffee pods into the correct bin to help your Green+ Leaders team with this initiative! Tassimo® pods are collected in their own bin.

How can one enjoy coffee and remain green at home?

Ideally, you brew coffee the old-fashioned way! A French Press, a stove top espresso maker (aka the Moka Pot) or an AeroPress® creates no waste other than used coffee grounds.

If you find the convenience of K-cups and their ilk inescapable please try your best to limit their environmental impact and keep plastic out of our landfills!

Most single use coffee pods can be collected with household organics and plastics, but users should do their homework to ensure that their pod, and its plastic type, is acceptable by their [regional collection program](#)

HOW YOU CAN RECYCLE OUR PODS IN SECONDS

1. **Cool It!** After you've finished brewing, allow the pod to cool completely before you touch it.
2. **Peel It!** Take the pod out and remove the foil lid. This lid can be thrown into your aluminum recyclable bin without any extra steps.
3. **Empty It!** Get all of the used coffee grounds out of the pod. While you could scoop these out over the sink or trash can, we suggest gathering the grounds together and recycling them into your compost.
4. **Recycle It!** Throw our plastic filter and pod into your recyclable plastic bin. Not only are you fueled up and ready to go, but you've also helped save the planet all before lunch!
